Keypad workflow explanation: Jingsheng keypad has three parts circuit, respectively by a combination of EM8159, KEY specific matrix, 2496.

First part: KEY specific MATRX way of working is from external struck clavier key-press trigger keyboard below the conductive film and then by MCU

On reading and judgment,   Part two: MCU its work style and computer CPU a truth, is digitally manipulated, discrimination, deal with external given

Instructions;   Part three: 2496 was a single RF (wireless transmitting IC), Its principle of work is by MCU sends commands let 2496 for wireless

Electricity transmission;
